### Energy and NYC

Dreamt up during the Blackout of 2003, this map was created to promote energy awareness or a healthy, beautiful city? and action in New York. Tired of paying more all the time? Sick of having a noisier, grimier community? We are surrounded by healthy energy choices - small changes, better habits and time-saving innovations! Let this Powerful Green Map guide you

to New York City's wealth of sustainable\* options. The Unfolding Story of this Map

Open this map in sections to view three maps: • Dark Side – Why We Need to Act Now • Bright Side – Every Day & Easy Green Choices **Powerful Investments** – For Today & Tomorrow

**\*Sustainability -** a balance of environmental integrity, social equity and economic vitality.

Climate Change - Global Warming: undeniably impacted by humanity's choices, weather is getting erratic and stormier, with dire predictions ahead. Emissions - airborne discharges of pollution, CO2 or water vapor, etc. into the atmosphere. **Renewable Energy -** powered by the sun: solar, wind,

biomass (plants) and other infinite resources. 🌐 = At this website address (may need **www.**) Click to learn more, download resources, etc. **)** = Call this telephone number for details

### About this Map

Green Maps are locally made maps of the natural and cultural environment that use Green Map® Icons to indicate sites and promote sustainability. This is the 225th published worldwide, as seen at 🌐 Green Map.org! NYC's is the original Green Map, and this energy edition is our fifth citywide Green Apple Map.

💭 = Get Maps at Greenmarkets, gardens, libraries, green businesses and at other sites on this map. Send in a stamped, self-addressed envelope for one copy or call/email for many. This map is also available as a poster, or tape 2 together for your wall. There's more energy online: I GreenAppleMap.org

has in-depth information, 💭, links and tips in Chinese, Spanish and English. See NYC youth maps, too. Green Map System PO Box 249, New York, NY 10002

### Bright Lights - Big Cit

New York's energy is legendary Requiring an investment of time or money, the green sites and resources on this half of the map use conservation and efficiency along wit renewables and other advanced and decentral ized forms of energy. Paybacks include rebates and tax credits, smaller utility bills, healthier neighborhoods and a true sense of security in

knowing you are a clean power generator.

Respecting the privacy of residents, please view sites from the street unless a specific address is provided. 🔼 = by appointment only, please Sites indicated with a single Green Map Icon give you an overview of the great progress being made.

### Glossary

Image: At this website address (may need www.) 100 + websites are included for your convenience = Call this telephone number for details

# 💢 = Get Green Maps here

🙍 = Green Buildings include efficiency, renewable energy, green materials and/or a green roof or garden. Every building in NYC can be greener

ings are sustainable site development, water save ings, energy efficiency, green materials selection and indoor environmental quality. 🌐 usgbc.org. = Green Roofs use a living carpet of plants to cool the air while insulating the building. There's

two kinds: extensive (not meant to be walked on) and intensive (more garden-like). Good for absorbing noise and rainwater, attracting birds and butterflies; fireproof, too. There are also coo roofs, painted to reflect heat. ( GreenRoofs.org and () CoolRoofs.org. () GreeningGotham.or has NYC case studies - our flat roofs are ideal!

Renewables and Alternatives generate clean en ergy locally. This "distributed generation" creates thousands of new jobs and reduces our dependence on foreign oil at the same time:

() = Fuel Cells create hydrogen to generate electricity on the spot, lowering 🗲 grid demand. **G** = **Geothermal** systems pump up warmth in winter or cold in summer from deep underground wells, where the temperature is always stable. • **Co-Generation** produces heat and either

electricity or mechanical energy from one fuel, dramatically increasing output. 💥 = Solar Panels generate electricity (PV systems) or hot water without emissions. Payback

Period is the cost of installation minus the savings on your electric bill. Net Metering means excess PV power can be sold to Con Edison.

¥ = **Bio-based** includes bio-diesel (recycle cooking oil to run your car!), anaerobic digest ers (such as the ones that use **62** 💥 Fresh Kills landfill's gas), and biomass, which includes plant-based fuels like ethanol.

+ = Wind or Marine Power spins turbines 24/7 to generate clean, quiet and efficient electricity.

# nergy Dark Sides: True Costs & Predictions

Wake Up Calls

# You Have the Power!

What's your dream for the future - the Baked Apple By exposing current and predicted energy-related problems on this map, our aim is to create aware-

ness and positive action for our common future. Even though NYC is known as the USA's most energy efficient city, we are paying a very high cost for our current power choices:

 the highest asthma rate in the country fossil fuel dependency, resulting in debt,

unhealthiness and injustice

• the insecurity of being unprepared for the future • the changing climate - the impacts of global warming are just dawning on us

# Climate Change Predictions

🔝 What happens to our city's 580 miles of 🗌 shoreline if the ocean water levels rise as Columbia Earth Institute's "Climate Change and a Global City" report (Vivien Gornitz, 2001 🌐 earth.columbia.edu) predicted? Without surge barriers, areas impacted by a 10 foot flood are shown in grey. Accelerated by the emission of carbon dioxide (CO2) and other greenhouse gases from cars, buildings, farms, landfills, etc., ancient glaciers and the North Pole are melting, pouring fresh water into the oceans. New York could lose its storm surge buffers, vital infrastructure (water treatment) and subway stations, airports

1

bridges) and biodiversity at the same time. Your energysmart actions today can help prevent this prediction from becoming reality.

### Is NYC prepared? Our fuelish choices are impacting everything –

2005's weather extremes including Hurricane Katrina, summer's record drought in the Midwest and Europe, Arizona's week-long 110° heat wave, Bombay India's 37 inches of rain in one day, then a two-foot snowfall in NYC in early 2006 — all are indicators we can no longer ignore. Get the booklet *Ready New York* **3**11, get climate change resources 🌐 greenhousenet.org.

06 💥 👌 🚹 26 Federal Plaza 290 Broadway and 500 Pearl Street are renewably powered government buildings. 🙍 NYC Department of Design and Construction has built 16 much-admired 🙍 projects. Download free manuals for high-performance buildings, geothermal heat pumps, efficient lighting at 🌐 nyc.gov/html/ ddc/html/ddcgreen/ or buy from 07 🛄 CityStore in the Municipal Building, 1 Centre Street.

Official Good News! The City has signed onto 🌐 SierraClub.org's national Cool Cities CO<sub>2</sub> campaign, NY State has a 25% renewable portfolio standard target for 2013, a 9-state climate pact and an important energy research and development authority 🌐 nyserda. org 🕽 1·866·NYSERDA. NY Power Authority 🌐 nypa.org has replaced 181,000 power-hungry fridges, and more. ability, NYC's Green Apple As seen at 🌐 nyc.gov/sus Initiatives include 🔘 fuel cells, microturbines and

O co-generation systems in dozens of buildings, and even a 🙍 competition. Find out more about CO2 and business incentives for reducing 🗲 grid demand at 🌐 nyc.gov/edc. City Council is on it too, ensuring that new buildings built by NYC meet LEED standards by 2007. Follow local legislation at () ClimateRescue.org and EANY.org and voice your opinion.

18 🕤 🛄 🏦 Center For Architecture 536 LaGuardia Place 🌐 aiany.org 🕽 212-683-0023 Rotating exhibits, events and info. Build it Green! NYC now has several great green architecture firms, see 

🙍 Renters and Owners, learn from experts with 🌐 GreenHomeNYC.org. Click Get Started for great advice and overviews of many buildings on this map, then check the calendar's cool events, including tours of and homes that don't often welcome the public.

Atlantic Ocean

50% of NYC's air pollution (and 80% of inhaled cancer-causing substances) comes from vehicle emissions, and the increase in heavier, less efficient autos and especially wide SUVs is costly to all. NYC has new pollution laws for garbage trucks, taxis, construction equipment, and buses. Studies show auto emissions will be reduced through congestion pricing (midtown tolls – see 🌐 RPA.org). Nationally, 20% of CO2 comes from autos. With 5% of global population, the USA contributes 25% of the CO2 (now at a 650,000 year high level!). 2005 was the hottest year on record.

Terror and trauma – over 40,000 Americans are killed each year by cars, trucks and buses. In NYC, there are over 650 accidents every day. 🕄 🕄 The 25 most dangerous intersections for pedestrians and cyclists are on the map. See 🌐 crashstat.org. Still gotta drive? Slow down! Drive with a light foot and see highlights at greenercars.com. Don't drive yourself to extinction.

Smokestacks from fossil fueled electrical power plants dot our waterfront. NYC's air quality is No.3 worst in the US, according to Environmental Defense, and over 185,000 of our kids already have asthma. See
